

Spring 2010

Dear Patients, Neighbors, and Friends:

I hope you enjoyed a Happy New Year! I deeply appreciate your support and trust and look forward to serving you in the coming year. The eye care field is constantly changing and we do our best to keep up with technology that improves our ability to protect your precious sense of sight. I want you to know about an important addition to our office.

Introducing Optos Digital Retinal Imaging. Optos provides an ultra-widefield view of the retina, optic nerve, and tissues of the internal eye. This is called an Optomap. It creates a permanent record of your retina for future comparison and can aid in detection of important eye diseases that often begin without noticeable symptoms. Optomap is an essential part of a thorough examination for patients of any age.

We will offer you the opportunity to have (and see!) your own Optomap at your next visit. You can find out more about Optos retinal imaging at optos.com or call us to learn more.

To introduce this service we are offering a twenty percent discount on your first Optomap. Schedule your exam now to take advantage of this limited time offer.

I hope you have a great year. Please think of us when you need vision care.

Sincerely,

Dr. Bro and Staff
